Homework 4

Activity 2

My username on Armbook is Hello World, with an id of 15. I got him to friend me by passing a link to the message board with the `add_friend.php` script and my id attached. The issue with this is that there is no CSRF Token verification within the code, so I added this into armbook to make sure any actions done by the user are legitimate and verified. This included changes to `add_friend.php`, `change_about.php`, `del_friend.php`, `home.php` and `add_comment.php`.

Activity 3

A solution to click-jacking would be to use the X-Frame-Options HTTP response header in server responses. Additionally, you can utilize the CSP `frame-ancestors` directive for specifying sources that are permitted to embed a page.
